Shashank Wankhade	190795	shashank1310

# Objective

- The Student's Placement Office, IIT Kanpur receives a lot of off-campus placement and internship offers from different firms.
- Many established companies also invite the students of IIT Kanpur to participate in hackathons and competitions via SPO.
- Currently, all of this communication is done by mailing the students about the same. This creates unnecessary spam, and especially for someone who's not interested in these opportunities.
- Programming Club, in collaboration with SPO, wants to create a unified portal for the same, wherein the students can check various intern/placement offers according to their needs and straightaway apply to these as well.

# Advantages

- **No more “mail” spam**

Firstly, it avoids the mail “spam”, as many offers roll out on a daily basis. Interested candidates can check out the portal at any time and apply straightaway.

- **Easy Application Process**

The student can fill in all the relevant information (Github id, LinkedIn profile, resume, CPI, etc.) beforehand in the profile section. Thereafter, everytime he/she wishes to apply, all the details shall be autofilled, making it a one-click process.

- **Reducing workload on SPO admins**

Everytime SPO is approached by any firm, they have the tedious task of creating and rolling out Google Forms to collect the applicant database. All this would be reduced to merely uploading the company details from the admin side and then downloading a CSV file containing details of all the applicants.

- **Offers as per the eligibility**

Many times, certain offers are limited only to some specific departments or programmes. Still receiving a notification regarding the same didn't make any sense. With the SCP, we filter out all the opportunities at the backend and show the students only the ones for which he/she is eligible.

- **Daily Digest (extended feature)**

An automated mail with all the relevant offers would be sent periodically (every 24 hrs) to inform the students. This shall be implemented once we're done with the basic architecture.

# Approach and Timeline

- Web stack consists of ReactJS + Django, which is best in the industry now in terms of rapid production and scalability.

- Open Sourced ReactJS template, Argon UI, was used to bootstrap the UI and cut short the process of designing stuff from scratch.
- The project members were first divided to work on the frontend and backend domain on a voluntary basis.
- The next two weeks were spent in learning about ReactJS and Django. All the members were pre-acquainted with basic HTML, CSS and version control technology.
- Next, issues were created and teams/individuals were assigned to work on them.

# ISSUES CREATED

- Frontend part

ISSUE NO. #	TITLE
1	<a href="#"><u>Setup the Register UI</u></a>
2	<a href="#"><u>Setup the Login UI</u></a>
3	<a href="#"><u>Setup the Profile Page</u></a>
4	<a href="#"><u>Setup Dashboard UI</u></a>
10	<a href="#"><u>Revamping the web-app design</u></a>
13	<a href="#"><u>Create the modal application form</u></a>
14	<a href="#"><u>Setting up the dashboard UI for admin</u></a>
16	<a href="#"><u>Integrate profile page with backend API</u></a>
17	<a href="#"><u>Integrate the Registration API</u></a>
18	<a href="#"><u>Fetch intern/placement detail</u></a>
21	<a href="#"><u>Integrate the admin UI with respective APIs</u></a>
23	<a href="#"><u>Login and logout integration</u></a>
24	<a href="#"><u>Reset Password</u></a>
26	<a href="#"><u>Login page and User/Admin dashboard path integration</u></a>

- Backend part

ISSUE NO. #	TITLE
1	<a href="#"><u>Create User model</u></a>
2	<a href="#"><u>Create Intern model</u></a>
3	<a href="#"><u>Create Placement model</u></a>
11	<a href="#"><u>Fetch User data API</u></a>
12	<a href="#"><u>Add Login and Logout System</u></a>
13	<a href="#"><u>Fetch intern data for a given user</u></a>
14	<a href="#"><u>Fetch placement data for a given user</u></a>
20	<a href="#"><u>Create a registration model</u></a>
21	<a href="#"><u>Create a unique identifier field in both placement and internship model</u></a>
25	<a href="#"><u>User Registration, Activation, Password Change</u></a>
27	<a href="#"><u>Edit user profile</u></a>
28	<a href="#"><u>Resume addition in the registration model</u></a>
--	Create admin model and the respective APIs
--	Add script to populate the database
--	Create the dockerfile
--	Update database to postgresql and add Email notifications

# Argon UI Framework

Argon is an open-source, free UI package based on Bootstrap 4 that includes the essential components and features. It is available on technologies like React, Bootstrap, Vue, Angular, Nodejs, Django etc.

## Why?

- It is built with over 100 individual components, giving us the freedom of choosing and combining. It comes with prebuilt examples, so the development process is seamless; switching from the inbuilt pages to the actual website is very easy.
- We saved a lot of time from prototyping to full-functional code because all elements are implemented, and we only get to set the logic part.
- Most of the styling and animation is already implemented. We don't have to write extended CSS and JS code for styling and animation, and the pages have a uniquely beautiful look and design.
- The components used in prebuilt examples are well documented, and the code is easy to understand. The sidebar has components like Dashboard, User-profile, login, and Register page so, we only changed the logic part of these components as per our need. Also,

it collapses on the small screen to a drop-down like Navbar, which makes the page responsive.

The login page has a blue header with the Argon logo and navigation links for Dashboard, Register, Login, and Profile. The main content area features a 'Welcome!' message and a prompt to use the forms for login or registration. A central white box contains the login form, which includes options to sign in with GitHub or Google, or with email and password. The form also has a 'Remember me' checkbox and a 'Sign in' button.

# FRONTEND FEATURES

- **Registration Page**

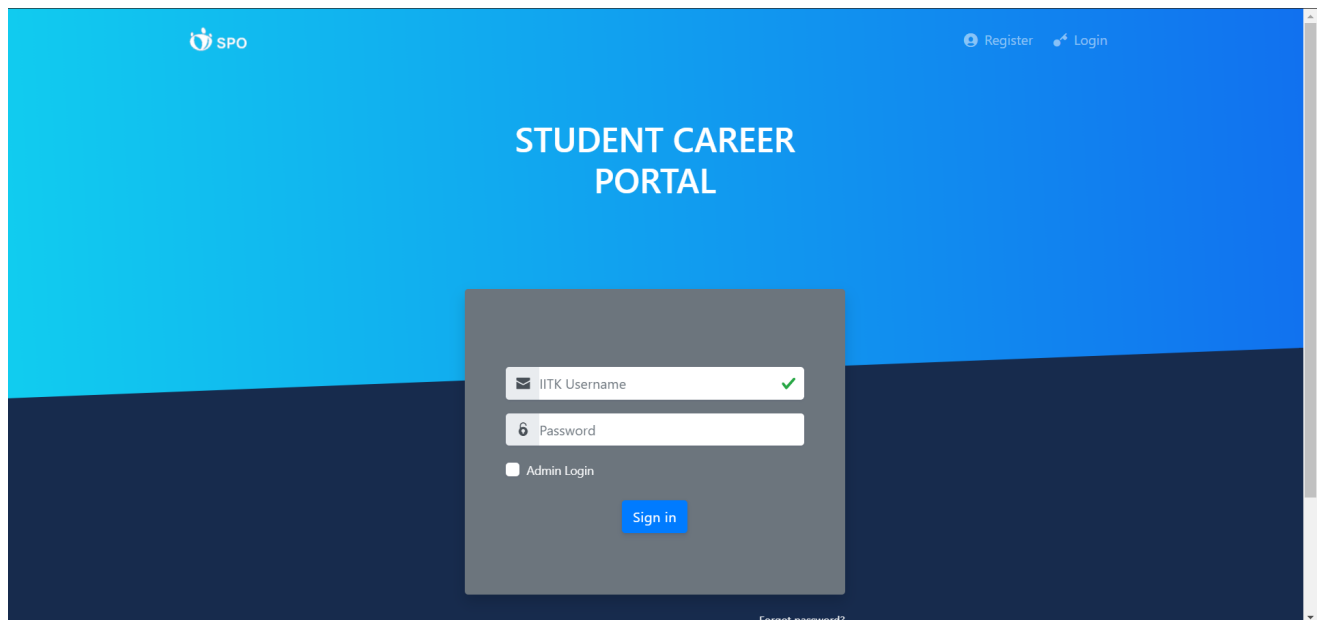

This page enables the user to sign up and register themselves to gain access to the system. It only asks for a **roll number** that has already been provided by the institution and uses the same to check for the user's existence by matching it with the data present on the servers. Once the user is validated, a notification prompting them to set up a password is sent, which can then be used to log in to the system.

The screenshot displays the 'STUDENT CAREER PORTAL' registration interface. The page has a blue gradient background. At the top left is the 'SPO' logo, and at the top right are links for 'Register' and 'Login'. The main heading 'STUDENT CAREER PORTAL' is centered. Below it is a registration form with a text input field labeled 'IITK Roll no.' containing a green checkmark, and a blue 'Submit' button. At the bottom, a footer states: 'Developed by [Programming Club, IIT Kanpur](#) Bootstrapped with [Creative Tim](#)'.

- **Login Page**

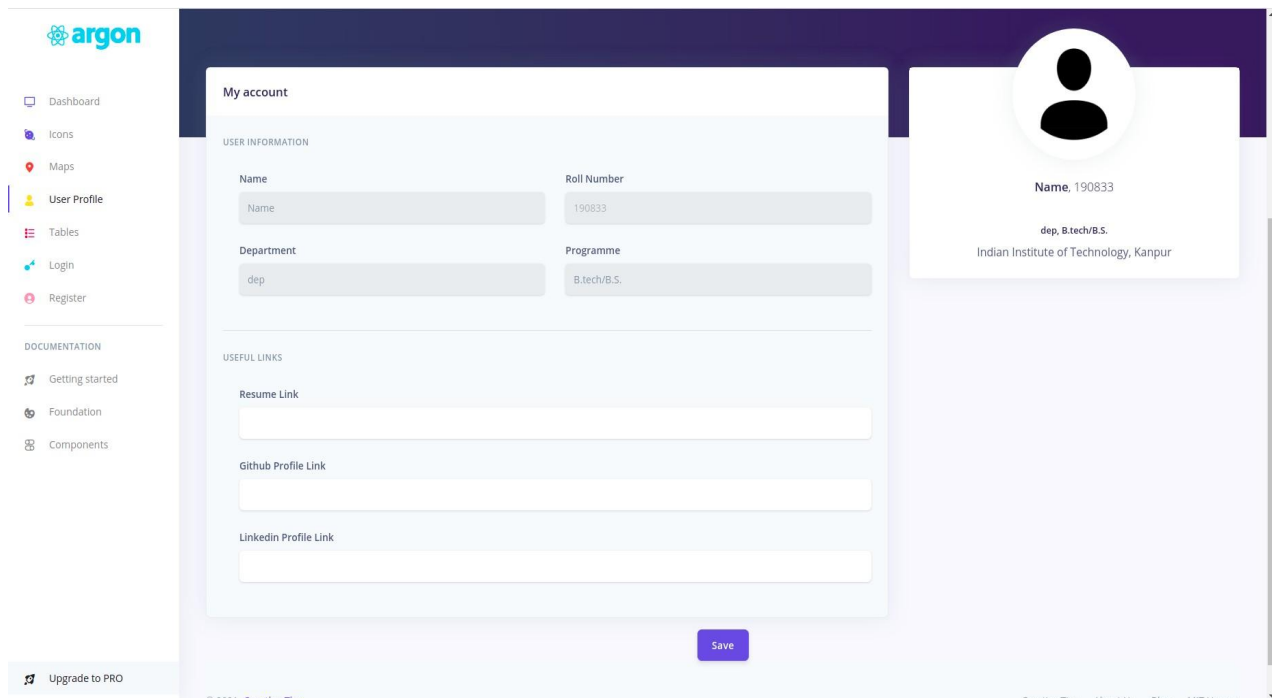

The Login page is the entry page to the website for the users and the admins. This page requires user identification and authentication, performed by matching the **username** and **password** combination entered by the user with the data saved in the database.

- **Profile Page**

The profile page contains relevant data of the user, which are generally asked or required while applying for an internship or a placement. This includes their name, programme, department, Roll Number, Resume Link, GitHub profile link, and LinkedIn profile link. This data is also saved in the database and can be updated as per the requirement.

- **Internship Page**

This page contains details of all the internship opportunities that the user is eligible for, listed in the form of a table. The table includes the name of the internship and organization, the job profile offered, and the deadline for application for the role. Users can find the other details regarding the job and the organization in the accordion provided in each row. They can also apply for the position directly from here by filling out a simple form. Most of the fields of this form will automatically get updated from the user's profile data, while the remaining fields that will be specific for an organization will have to be provided manually by the user.

- **Placement Page**

This page is entirely similar to the internship page. The only difference is that it contains details regarding the placement offers, whose eligibility criteria are satisfied by the user.

- **Admin Page**

This page is the main link between the students and the organizations providing internship/placement offers. It contains all the functionalities essential for the admin to keep the students informed about the internship and placement opportunities offered throughout the year.

The screenshot displays the 'ADMIN PLACEMENT' interface. On the left, a sidebar contains the SPO logo and two menu items: 'Admin Placement' (selected) and 'Admin Internship'. The main content area has a blue header with the title 'ADMIN PLACEMENT', a search bar, and a user profile icon. Below the header is a table with columns: SR.NO., NAME, ORGANISATION, PROFILE, DEADLINE, DETAILS, DOWNLOAD, and DELETE. A green 'Add Offer' button is positioned above the table rows. The table contains two entries:

SR.NO.	NAME	ORGANISATION	PROFILE	DEADLINE	DETAILS	DOWNLOAD	DELETE
1	place2	Orgo2	role2	2021-07-30T00:15:00+05:30	+	Download icon	Delete icon
2	place1	company1	some role	2021-07-28T21:17:00+05:30	+	Download icon	Delete icon

Below the table, there are navigation controls: '<<' and '<' buttons, 'Page 1 of 1', a 'Show 10' dropdown, and '>' and '>>' buttons. At the bottom of the page, a footer states 'Developed by Programming Club, IIT Kanpur'.

The admin page has the following two major components :

**i) Internship Page**

This page allows the admins to add or delete any internship opportunity relevant to the students. They can also download and monitor the details provided by the students who have applied for a particular position provided by an organization.

**ii) Placement Page**

This page is entirely similar to the internship page, with the only difference being that it takes into account placement offers.
